„Recent Advances in Asymmetric Catalysis”

This presentation will describe the synthesis of new bisoxazoline ligands and their application in the Friedel-Crafts alkylation and ferroceneoxazoline-containing ligands in diethylzinc additions. In addition, the design and synthesis of novel ferrocene-containing diols as a novel scaffold for asymmetric catalysis.

The development of the Pd-catalysed decarboxylative asymmetric protonation and decarboxylative asymmetric protonation for the preparation of α -arylketones and α -allyl- α aryl-ketones will be described.
